

Kaspersky® Open Space Security

A progressive and integrated approach to protecting corporate networks

Includes, centrally managed:

- ✓ Endpoint Protection
- ✓ Anti-Virus
- ✓ Anti-Spyware
- ✓ Anti-Rootkit
- ✓ Firewall
- ✓ Anti-Spam
- ✓ Centralised Remote Management
- ✓ Host-Based IDS
- ✓ Registry & Application Guard
- ✓ Application Integrity Control
- ✓ Support for Cisco® NAC (Network Admission Control)
- ✓ Scalable, With Multi-Platform Support

About Kaspersky® Open Space Security:

Kaspersky® Open Space Security is a customisable security suite expressly designed to protect enterprise information systems from disruption by existing and potential cyber threats. Combining antivirus, anti-spam, anti-spyware and protection against phishing and rootkits in one package, the solution combines the use of traditional signature-based anti-virus technology with the ability to monitor system processes to look for malicious programs. The software provides separate policies for mobile devices, which take effect when a device is disconnected from the corporate network. Developed to run in a multi-platform environment, the solution's scalable components ensure increased productivity. The award-winning centralised management console, Kaspersky® Administration Kit, enables centralised installation, configuration, monitoring and management in accordance with your enterprise security policy. A versatile enterprise-focused licensing scheme, support for cluster technology and an extended set of applications secure effective and customisable threat protection.

About Kaspersky Lab:

Kaspersky Lab delivers the world's most immediate protection against IT security threats, including viruses, spyware, crimeware, hackers, phishing, and spam. Kaspersky Lab products provide superior detection rates and the industry's fastest outbreak response time for home users, SMBs, large enterprises and the mobile computing environment. Kaspersky® technology is also used worldwide inside the products and services of the industry's leading IT security solution providers. Learn more at www.kaspersky.co.uk. Kaspersky® Open Space Security Component Structure Overview:

PDAs & Smartphones	Internet Gateway	Mail Server	File Server	Workstations	Management Console	
						Kaspersky Work Space Security [KOSS 1]
						Kaspersky Business Space Security [KOSS 2]
						Kaspersky Enterprise Space Security [KOSS 3]
						Kaspersky Total Space Security [KOSS 4]

Kaspersky® Work Space Security:

Kaspersky Work Space Security provides centralised protection for workstations both on the corporate network and those used remotely from all types of contemporary Internet threats, including viruses, spyware, hacker attacks and spam. Exercising full control over incoming and outgoing data (including email, web traffic and network interactions) on the PC, the solution ensures full security for users, whether they are in the office or out and about.

Product Highlights

- Integrated protection from viruses, spyware, hacker attacks and spam
- Proactive protection from new or unknown malicious programs
- Personal firewall with IDS and IPS
- Roll back of any malicious changes made to the system
- Protection from phishing and spam attacks
- Intelligent redistribution of resources during full system scans

Additional Features

- Centralized installation and administration
- Support for Cisco® NAC (Network Admission Control)
- On-the-fly scanning of email and Internet traffic
- Pop up window & banner blocker during Internet use
- Security when working on any type of network, incl WiFi
- Tools to create a rescue disk
- Advanced system for reporting system status
- Automatic updates to databases
- Full support for 64-bit platforms
- Laptop optimised (Intel® Centrino® Duo mobile technology integration)
- Remote treatment using Intel® Active Management (Intel® vPro™)

Component List

- Kaspersky® Anti-Virus for Windows Workstation
- Kaspersky® Anti-Virus for Linux Workstation

Supported Platforms / Operating Systems

- Workstations: Microsoft Windows (including 64-bit) & Linux

Kaspersky® Business Space Security:

Kaspersky Business Space Security provides high-quality protection for corporate assets from all types of contemporary Internet threats. Expressly designed to meet the increasing demands of servers operating under heavy loads, this solution provides protection over workstations and file servers from all types of viruses, Trojans and worms, prevents epidemics and keeps information secure and fully accessible to users of network resources.

Product Highlights

- Scalable, with centralised installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Integrated protection for workstations and file servers from all types of Internet threats
- iSwift technology prevents superfluous repeat scans of data within the network & server processor load balancing
- Quarantine of infected workstations
- Roll back for malicious changes made to the system

Additional Features

- Proactive protection from new and unknown malicious programs
- On-the-fly scanning of email and web traffic
- Personal firewall with IDS and IPS
- Security when working on any type of network, including WiFi
- Self-defense technology from malicious programs for the anti-virus solution
- Quarantine storage of suspicious objects
- Automatic updating of databases

Component List

As for Kaspersky Workspace Security, plus:

- Kaspersky® Anti-Virus for Windows Server
- Kaspersky® Anti-Virus for Linux File Server
- Kaspersky® Anti-Virus for Samba Server
- Kaspersky® Anti-Virus for Novell NetWare

Supported Platforms / Operating Systems

- Workstations: Microsoft Windows (including 64-bit) & Linux
- File servers; Microsoft Windows (including 64-bit), Novell Netware, Linux & Samba

Kaspersky® Enterprise Space Security:

Kaspersky Enterprise Space Security ensures a free flow of information within the company and secure communication with the outside world. The solution comprises components for the protection of workstations and servers from all types of contemporary Internet threats; it removes viruses from email and keeps information secure and fully accessible to users of network resources.

Product Highlights

- Protection for workstations and servers from viruses, Trojans and worms
- Protection for mail servers incl Sendmail, Qmail, Postfix & Exim
- Scanning of all messages transmitted via Microsoft Exchange servers
- Scanning of messages, databases and other objects on Lotus Notes/Domino servers
- Protection from phishing and spam attacks
- Blocking of virus epidemics
- Scalability

Component List

As for Kaspersky Business Space Security, plus:

- Kaspersky® Anti-Virus for Microsoft® Exchange
- Kaspersky® Anti-Virus for Linux Mail Server
- Kaspersky® Anti-Virus for Lotus Notes/Domino

Additional Features

- Centralised installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Proactive protection from malicious programs
- Personal firewall with IDS and IPS
- Security when working on WiFi networks
- On-the-fly scanning of web traffic
- Roll back of malicious changes made to the system
- Intelligent resource redistribution during full system scans
- Quarantine of infected and suspicious objects
- System for reporting on system status
- Automatic updating of databases

Supported Platforms / Operating Systems

- Workstations: Microsoft Windows (including 64-bit), Linux
- File servers; Microsoft Windows (including 64-bit), Novell Netware, Linux & Samba
- Mail servers and groupware servers: Microsoft Exchange, Lotus Notes/Domino & Linux (Sendmail, Qmail, Postfix & Exim)

Kaspersky® Total Space Security:

Kaspersky Total Space Security provides integrated protection for corporate networks of any size or level of complexity from all types of contemporary Internet threats. The solution exercises control over all incoming and outgoing data – including email, web traffic and all network interactions. The product comprises components for the protection of workstations and mobile devices, ensuring users secure, fast access to company information, resources, the Internet; secure communications via email.

Product Highlights

- Integrated protection from viruses, spyware, hacker attacks and spam at all levels of the corporate network – from workstations to Internet gateways
- Proactive protection from the newest malicious programs
- Protection for mail servers and file servers
- Scanning of web traffic(HTTP/FTP)in real-time
- Scalability
- Quarantine of infected workstations and blocking of virus epidemics
- Centralised reporting on system status

Component List

As for Kaspersky Enterprise Space Security, plus:

- Kaspersky Anti-Spam
- Kaspersky® Anti-Virus for Microsoft® ISA Server
- Kaspersky® Anti-Virus for Proxy Server
- Kaspersky® Anti-Virus for CheckPoint Firewall-1
- Kaspersky® Anti-Virus for MIMESweeper
- Kaspersky® Anti-Virus Mobile

Additional Features

- Centralized installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Support for hardware proxy appliances
- Intelligent redistribution of resources during full system scans
- Personal firewall with IDS and IPS
- Security when working on any type of network, including WiFi
- Protection from phishing and spam attacks
- Remote treatment using Intel® Active Management (Intel® vPro™)
- Roll back of malicious changes made to the system
- Self-defense technology from malicious programs for the antivirus solution
- Full support for 64-bit platforms
- Automatic updating of databases

Supported Platforms / Operating Systems

- Workstations: Microsoft Windows (including 64-bit) & Linux
- File servers: MS Windows (incl 64-bit), Novell Netware, Linux and Samba
- Mail & groupware servers: MS Exchange, Lotus Notes/Domino & Linux
- Internet gateways: MS ISA Server/Squid Proxy Server and CheckPoint Firewall-1
- Mobile devices: Symbian & Windows Mobile

Relevant Industry Analyst Quote:

“By the end of 2007, 75% of enterprises will be infected with undetected, financially motivated, targeted malware that evaded their traditional perimeter and host defenses. The threat environment is changing — financially motivated, targeted attacks are increasing, and automated malware-generation kits allow simple creation of thousands of variants quickly — but our security processes and technologies haven't kept up.”

Gartner Key Predictions for IT Organizations in 2007 and Beyond – Dec 2006
